

COVERFree Case Study

Roko Health Clubs

The Rokko Health Club group have five sites in the UK offering quality gym and leisure facilities.

Rokko decided to trial the new COVERFree liquid pool cover product from HeatPumps4Pools Ltd. They had previously been using another liquid pool cover product (HeatSavr) and wanted to evaluate the performance, benefits and cost savings that using COVERFree could offer.

COVERFree was initially trialled on two pools at Rokko's York site. The pools are 20 x 8m and 6 x 6m in size.

Stuart Holmes, Maintenance Manager at Roko's York site reported "The changeover from Heatsavr to COVERFree was incredibly straightforward and problem free. We simply flushed the existing dosing pump through, recalibrated it and primed it with the COVERFree liquid pool cover"

"After extensive testing, we have found COVERFree to be just as effective as the previous liquid pool cover product that we were using for reducing heat loss, evaporation, and water loss from the pool. "

“COVERFree’s lower dosing rate means that the amount of liquid pool cover used has reduced by over 50% from 144 ml per day to 78 ml per day required by COVERFree. This will give us substantial cost savings by using COVERFree on our five pools

Our building management system (BMS) accurately records the running costs for the pool heating and air handling and we have found that using COVERFree gives us measurable cost savings for the heating of the pool water, the dehumidification process and the air heating. “

As well as the cost savings that using COVERFree can offer, Roko also found other benefits arising from the fact that COVERFree does not contain any alcohol and uses a patented polymer based formula.

As COVERFree is non-flammable, Roko found that the risk assessment for the pool plant room was not as high compared with the previous flammable alcohol based product.

The success of the trial of COVERFree at the Roko Health Club will see its deployment to all pools in the group to deliver considerable cost savings and to allow the group to meet its energy reduction and environmental targets.

COVERFree is suitable for both indoor and outdoor domestic and commercial pools. It is available in three sizes with no minimum order quantity and free delivery. COVERFree can be added to the pool by hand or an automatic dosing pump is available.
